

# KENOVA SOFT LINE TOOLMANAGER

The solution for effective Tool Management.

# KELCH

## Features:

### • Industrial (Engineering)

- Create entries and maintenance of tool components
- Direct access to tool configurations including the 3D graphics generator
- Display of processes and work pieces "waiting" to be released. The planner is immediately aware of what needs action.
- Configuration of tool assemblies, machines and data generation for nc-verification
- Generate fixtures, measuring gauges and other equipment – for all running processes and job steps

### • Advanced (Workshop)

- Execute inventory bookings via Drag-and-Drop.
- Presetting overview – simple measuring of saved complete tools via interface to EASY and thereby also to the presetter
- Create and administer tool items (there may be several instances of a tool type) and tool layouts.
- Detailed information about my tool inventory

(Where and in which status is a certain tool, how is it to be assembled and are all required tool components at hand?)

- Overview over the next manufacturing jobs and over machine status (running, idle, break down)
- Generate delivery orders for tool assemblies according to the tool list

### • Premium (Supply)

- Releasing of purchase orders, monitoring of inventory levels, control of delivery status
- Supplier management – Maintenance of logistics parameters (safety stock, minimum order quantity)
- Create special orders
- Proposals for purchase orders (by material or supplier)
- Is a purchase order for a tool component already released and if yes, when will it be available?
